

DESIGN

Exterior Design

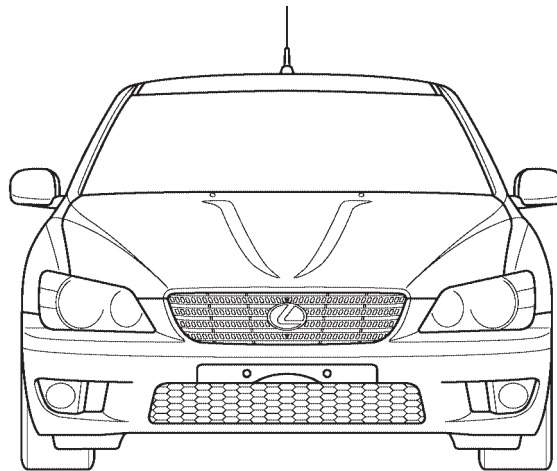

- The shape of the bumper emphasizes the vehicle's short overhang, thus revealing its small turning radius.
- The modern silhouette marks a departure from the small cabin style seen in conventional sporty cars.
- The sporty yet unique style also achieves a high level of habitability.

MO

◆ Front Design

The front mask has an aggressive yet intelligent demeanor. A new type of sportiness is expressed from the low center-of-gravity and well-defined face.

- A powerful hood bulge form exudes the power of the high-performance engine.
- The round headlights with free-curve reflectors give a sporty, glaring look.
- A gun-metallic front grille mesh design has been adopted to dress up the opal shaped ornaments to express the modern and sporty look of the Lexus model.

◆ Side Design

The sharply wedged under design and the cabin-integrated silhouette help express the vehicle's high level of drivability and excellent habitability.

- The large flares emphasize the four wheels and give the vehicle a feeling of being well grounded.
- A continuous flow links the hood bulge to the front pillar, and the quarter pillar is tilted to achieve a flowing side silhouette.
- The characteristic wedge character line that extends from the rear flare emphasizes the vehicle's sportiness.
- The straight fender line with a sharp edge expresses the vehicle's refinement and intelligence.
- The bulging rockers curve low and outward at the front and rear fender arches to emphasize the vehicle's low center-of-gravity.

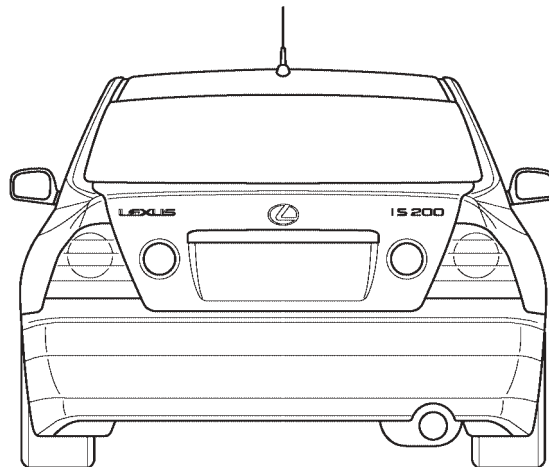

163MO603

◆ Rear Design

The simple circular arcs with dynamic tension express the vehicle's power, just as in the front design.

- By locating the rear fog lights in the luggage compartment door, a wide luggage compartment opening and a low loading height have been realized to ensure the ease of use.
