

## ■ FRONT DISC BRAKE

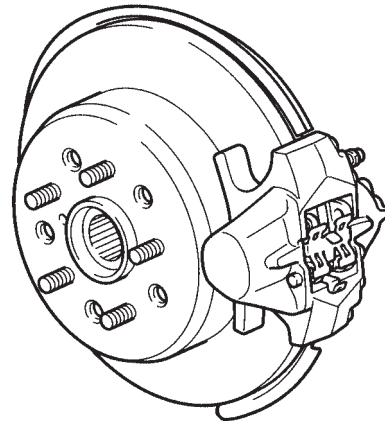

A twin-piston disc brake caliper with good braking performance, and a ventilated disc rotor, with good cooling performance, are used for the front brakes.

163CH45

## ■ REAR DISC BRAKE

- A compact and lightweight opposed type caliper is used.
- A brake caliper, in which the brake pads can be replaced by removing the pad spring, pad pin and clip has been adopted for improved serviceability.

163CH46

## ■ PARKING BRAKE

- The parking brake is used a duo-servo type which is enclosed in the rear disc rotor.
- A center lever type parking brake lever is used.
